

Product Overview

# DMC-Mail for OpenText Content Server

Discover, cleanse and migrate your legacy MS Outlook PST files content to OpenText Content Server...easily!

## The Simple Steps to PST file content migration

- Extract message file data from your PST file to a simple spreadsheet format.
- Cleanse message file data and create a subset of messages for migration
- Extract messages objects from your PST to your Content Server load area
- Bulk load mail message files to Content Server complete with metadata
- Alternatively...simply extract all messages from your PST file to your network load area (without cleansing) and bulk load to Content Server
